

module7

BP

homophilic cell adhesion via plasma membrane adhesion molecules
macromolecule modification
protein modification process
nervous system development
establishment of protein localization
intracellular transport
transport
protein transport
localization
cell-cell adhesion via plasma-membrane adhesion molecules
vesicle-mediated transport
establishment of localization
protein modification by small protein conjugation or removal
intracellular protein localization
cellular localization
establishment of localization in cell
modification-dependent protein catabolic process
post-translational protein modification
modification-dependent macromolecule catabolic process
ubiquitin-dependent protein catabolic process

MF

enzyme binding
protein binding
small molecule binding
ion binding
GTPase binding
catalytic activity, acting on a protein
tubulin binding
small GTPase binding
nucleotide binding
nucleoside phosphate binding
binding
ubiquitin-protein transferase activity
microtubule binding
acyltransferase activity
purine nucleotide binding
heterocyclic compound binding
purine ribonucleoside triphosphate binding
purine ribonucleotide binding
ubiquitin-like protein transferase activity
ribonucleotide binding
