

module24

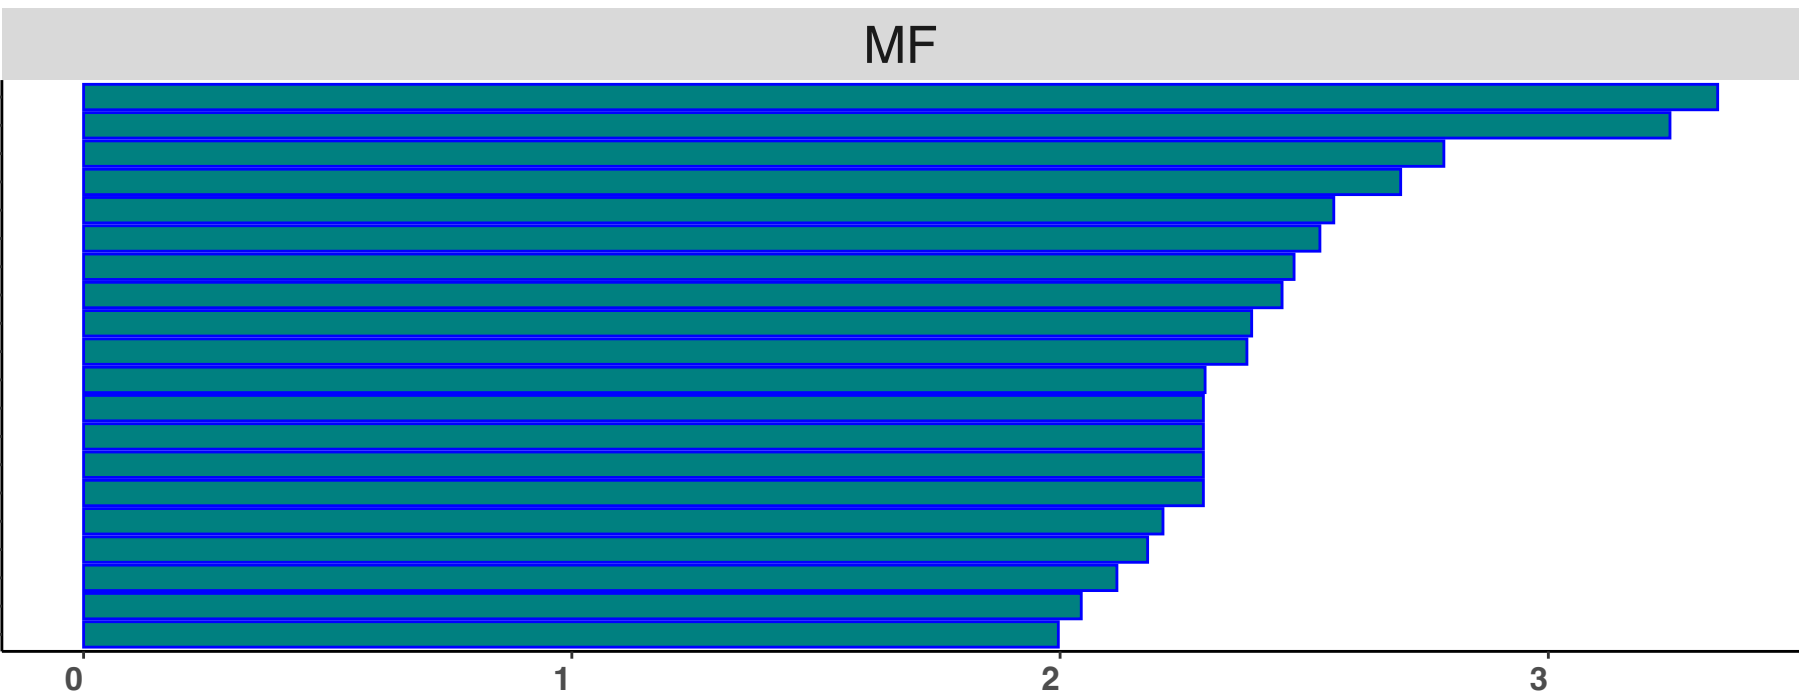

BP

- regulation of establishment or maintenance of cell polarity
- metal ion transport
- inorganic ion transmembrane transport
- growth plate cartilage chondrocyte differentiation
- actin filament-based process
- actin cytoskeleton organization
- inorganic cation transmembrane transport
- monoatomic cation transmembrane transport
- monoatomic ion transport
- chondrocyte differentiation involved in endochondral bone morphogenesis
- Cdc42 protein signal transduction
- monoatomic ion transmembrane transport
- detection of mechanical stimulus
- monoatomic cation transport
- detection of mechanical stimulus involved in sensory perception of sound
- growth plate cartilage development
- cellular response to 1-oleoyl-sn-glycerol 3-phosphate
- axonemal microtubule depolymerization
- actin filament bundle retrograde transport
- actin filament bundle distribution

MF

- actin binding
- cytoskeletal protein binding
- myosin II binding
- metal ion transmembrane transporter activity
- cytoskeletal motor activity
- type I interferon receptor binding
- bioactive lipid receptor activity
- polypeptide conformation or assembly isomerase activity
- calcium channel activity
- plus-end-directed microtubule motor activity
- microtubule motor activity
- high-affinity sodium:dicarboxylate symporter activity
- glucagon family peptide binding
- gastric inhibitory peptide receptor activity
- aspartoacylase activity
- calcium ion transmembrane transporter activity
- symporter activity
- solute:sodium symporter activity
- PDZ domain binding
- sodium ion transmembrane transporter activity

-log10(p-value)
